Hasan Al Mahmud

Full Stack Developer

Dhaka, Bangladesh (Remote) · hamsakib03@gmail.com · +880 1842 001223
Live work: skinmaxbd.com · quantmaxautomation.com
Available on USA EST or Europe CET hours as a fixed long-term schedule.

PROFILE

Self-taught full-stack developer with systems running in production that I designed, built and deployed myself: a live e-commerce platform on Next.js and Supabase with an AI shopping assistant, courier and payment integrations and a full admin back office, plus the automation infrastructure behind my own studio. I work across the stack, from React front end and API logic to PostgreSQL schema, third-party integrations and deployment, and I own what I ship, including the debugging at the far end of it. AI-assisted development in Claude Code is my default build method, and LLM features are a working part of what I build. IELTS Academic 7.5.

TECHNICAL SKILLS

- **Front end:** React, Next.js 15 (App Router, server components), TypeScript, JavaScript, HTML, CSS, mobile-first responsive layout.
- **Back end:** Node.js, Python, REST API design, server actions, webhooks, scheduled jobs.
- **Databases:** PostgreSQL via Supabase: schema design, migrations, row-level security, backups and restore drills.
- **Integrations:** courier APIs (RedX, Steadfast, Pathao), SMS gateway with one-time-password login, transactional email (Resend), Meta Pixel and Conversions API, payment gateway (SSLCommerz), OAuth and API-key auth, retries and rate limits.
- **AI:** Claude, OpenAI and Gemini APIs; chatbots grounded in live data; prompt engineering; AI-assisted development in Claude Code.
- **Automation:** n8n, GoHighLevel, event-driven and scheduled pipelines; Messenger, Instagram and WhatsApp bots.
- **Tooling and deployment:** Git, Vercel (edge caching, environments, rollback), browser developer tools, SEO and structured data.

PROJECTS

skinmaxbd.com: production e-commerce platform

2024 – Present · Live and taking orders

- Designed, built and deployed a full skincare and haircare store on Next.js and Supabase: catalogue, cart, SMS one-time-password login, customer accounts, order flow and a guided skin-quiz recommendation feature.
- **Skinie AI assistant:** Gemini-powered chat that answers in English, Bangla and Banglish in 2 to 3 seconds and recommends live products as cards with photos and prices. Tested against live data; fixed wrong-language replies, an invented policy and stray characters; added rate limits and usage analytics that never store chat text.
- **Back office:** admin tools for orders, hand-typed phone orders, courier booking and cancellation through three courier APIs, barcode scanning with the phone camera, printable invoices, finance tracking, lead management and visitor insights.
- **Growth features:** "Skin Bestie" interactive routine builder with SMS delivery and a four-week reminder job; instant lead alerts by email; one-click branded SMS to leads; Meta Pixel and Conversions API; English and Bangla SEO guides with structured data.
- Own the schema, API layer, integrations, infrastructure and deployment; migrations run only after a database backup.

Chatbots: Quantmax, Facebook, Instagram and WhatsApp

2026

- Built an AI chatbot for Quantmax, plus Facebook Messenger and Instagram auto-replies and WhatsApp bots that answer common questions and capture leads.

quantmaxautomation.com: Next.js 15 marketing site

2026

- Full site designed and built on Next.js 15 and TypeScript, planned and executed in five structured delivery phases.

Order Autopilot and Reply Rocket

2026

- n8n order pipeline (intake, validation, enrichment, routing, notification) with error handling and retries so failures are logged, not dropped.
- LLM support-reply workflow that drafts answers and routes them through a human approval step before sending.

EXPERIENCE

Founder & Developer, Quantmax Automation, Dhaka (Remote)

2025 – Present · Automation studio serving U.S. and European agencies

- Build automation and AI systems for agency clients: requirements, architecture, implementation, testing, deployment and documentation.
- Debug across the full stack: API responses, authentication, data-shape mismatches, workflow logic and third-party platform behaviour.

Co-Founder & Technical Lead, Skinmax, Dhaka

2024 – Present · Online skincare retailer

- Own the entire technology side of the business while my partner runs daily operations: store, back office, integrations, AI assistant and maintenance.

EDUCATION & LANGUAGE

North South University, Dhaka: Computer Science coursework, 2020 – 2023. Left to build full time; continued self-directed study in TypeScript, React, Python, Supabase and LLM systems.

IELTS Academic, Overall Band 7.5. All technical documentation and client communication in English.
